Surekha Jagtap

Tech Lead – Full Stack Development | React.js · TypeScript · Java / Spring Boot · Microservices · AI-Assisted Engineering

Airoli, Navi Mumbai, Maharashtra 400708, India | 9892560081 | surekhaeq@gmail.com | linkedin.com/in/surekhajagtap

PROFESSIONAL SUMMARY

Technical Lead with 19+ years of experience architecting, building, and scaling enterprise web applications, including 16+ years with Gupshup Technology. Specialized in front-end engineering (React.js, JavaScript, TypeScript) and back-end/distributed systems (Java, Spring Boot, Microservices, REST/GraphQL APIs), with strong grounding in system design, scalability, and high-availability architecture. Combines hands-on development with technical decision-making, code reviews, Agile/Scrum delivery, and mentoring of a team of 7 engineers. Believes great software is built by solving the right problems with practical, scalable, and maintainable solutions, and is passionate about using AI-assisted engineering practices to drive innovation, contribute to business success, and deliver high-quality, high-impact products.

TECHNICAL LEADERSHIP

- **Technical Leadership:** Led frontend and integration architecture and system design for enterprise platforms, driving scalable, high-availability solutions using Micro Frontends, Module Federation, React, distributed systems principles, and modern engineering practices.
- **Team Mentorship & Cross-Functional Collaboration:** Mentored and led a team of 7 developers, enforced code quality standards and Agile/Scrum best practices, and collaborated closely with Product, QA, DevOps, and Backend teams to deliver high-quality solutions.
- **Architecture, Delivery & Production Ownership:** Owned API governance, CI/CD, release management, and observability/monitoring processes; led critical production issue resolution and stakeholder communication; successfully delivered major platform migrations with minimal business impact.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), React Hooks, HTML5, CSS3, Material UI, Bootstrap, AngularJS, Responsive Design

Backend & Java: Java 8+, Java/J2EE, JSP, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Cloud, Node.js, JSON

APIs & Microservices: REST API Design, API Gateway, Service Contracts, API Versioning, Sync/Async Communication, OpenAPI/Swagger, JWT/OAuth2, RBAC, XSS/CORS

System Design & Architecture: Distributed Systems, Scalability, High Availability, Event-Driven Architecture, Fault-Tolerant Systems, Caching Strategies

Database: MySQL, SQL Query Optimization, Reporting Queries, Schema Debugging

DevOps, Cloud & Tools: AWS EC2/S3, GCP, Docker, Kubernetes, Apache Tomcat, Maven, Git/GitLab CI/CD, Jest, Chrome DevTools, Postman, Jira

Engineering Practices & Leadership: Agile/Scrum, TDD, Unit & Integration Testing, Code Reviews, Observability & Monitoring, Stakeholder Management, Roadmap Ownership

AI-Assisted Development: Cursor AI, Claude, ChatGPT — currently upskilling via a Career Accelerator Program covering LLMs, RAG patterns, and AI development tools

PROFESSIONAL EXPERIENCE

Tech Lead – Full Stack Development

Gupshup Technology India Pvt. Ltd., Mumbai | Dec 2009 – Aug 2026 (16+ Years)

- Lead the architecture and development of enterprise-scale messaging, communication, and wallet platforms using React.js, Next.js, TypeScript, Java, Spring Boot, REST APIs, GraphQL, and Microservices, applying distributed systems and system design principles across enterprise-scale platforms.
- Designed and delivered scalable web applications from concept to production, improving user experience, application performance, and platform adoption.

- Led the migration from a monolithic application to a Micro Frontend architecture using Module Federation, enabling independent deployments and faster feature delivery across teams.
- Built reusable UI component libraries and established frontend standards, significantly improving development consistency and reducing implementation effort across multiple products.
- Owned end-to-end integration between frontend applications and Java-based backend services, governing API contracts, versioning, security, and performance optimization across REST/GraphQL endpoints.
- Successfully led the Wallet Platform API migration from v1 to v2, coordinating cross-functional teams and ensuring zero disruption to existing customers.
- Established engineering best practices, including code reviews, Agile/Scrum delivery, TDD and Jest-based unit/integration testing, and CI/CD automation using GitLab, improving code quality and release velocity across AWS environments.
- Implemented security controls including JWT authentication, secure cookie handling, input validation, CORS policies, and application monitoring and observability to strengthen platform security.
- Led troubleshooting and root-cause analysis of critical production issues across UI, API, and backend systems, reducing mean time to resolution (MTTR) and improving platform stability and reliability.
- Mentored and coached a team of 7 engineers, drove architectural decisions, and collaborated closely with Product, QA, DevOps, and business stakeholders to deliver high-quality software solutions.

Key Projects

Enterprise Messaging Platform (Java/J2EE)

- Developed and maintained customer-facing modules for a high-volume enterprise messaging platform using Java/J2EE, JSP, and Apache Tomcat. Integrated messaging gateway services through REST APIs with synchronous and asynchronous processing, improving reliability and error handling.

Enterprise Email Marketing Platform

- Designed and developed an AngularJS-based email campaign management application supporting campaign creation, audience segmentation, bulk uploads, scheduling, delivery tracking, and analytics. Integrated multiple backend services to streamline enterprise marketing operations.

Campaign Management Console

- Architected and developed a React-based campaign management platform using Micro Frontend architecture (Module Federation). Built reusable UI component libraries and integrated campaign management APIs, enabling faster development and independent team deployments.

Wallet & Payment Platform

- Led frontend architecture and API integration for wallet management, transaction processing, billing, invoicing, GST compliance, KYC workflows, and multi-currency payment solutions. Integrated payment gateways including Razorpay and Stripe, and successfully led the migration from Wallet API v1 to v2 with zero impact on live customer operations.

Web Developer | Web Developer & ASP Programmer

Quasar Media Pvt. Ltd. (Aug 2008 – Dec 2009) & Equal Communications (Sep 2005 – May 2007)

- Built and maintained responsive, cross-browser client websites using HTML, CSS, JavaScript, and ASP; converted UI designs into functional pages in close collaboration with designers.
- Implemented on-page SEO (keyword optimization, meta tags, sitemaps) and supported testing, content updates, and production deployment cycles.

EDUCATION

Bachelor of Engineering (BE), Electrical Engineering

Savitribai Phule Pune University | 2001 – 2005
